EDUCATION

Georgia State University

M.S. Computer Science | *B.S. Computer Science* | *Spring 2027 GPA 3.5*

Leadership: Co-Founder progsu(**1200+ Members**), President IEEE GSU chapter, President Barbell Club, Grad TA

Relevant Courses: Cloud Computing, Machine Learning, Algorithms/Data Structures, Data Science, Network Security

TECHNICAL SKILLS

Languages: Python, Java, TypeScript/JavaScript, SQL, HTML/CSS

Frameworks: React, FastAPI, NodeJS, React Native, Express, Pandas, NumPy, XGBoost

Tools: AWS, Terraform, Git, Claude, Cursor, Docker, Buildkite, CI/CD, PostgreSQL, GCS, Firebase, Supabase

EXPERIENCE

Software Engineering Intern

June 2026 – Present

FanDuel

- Provisioned a multi-tenant serverless AWS platform using Terraform spanning S3, CodeBuild, CloudWatch, CloudFront, and DynamoDB to deliver version-controlled deployment of internal websites
- Engineered an MCP server in Python, enabling employees to upload, deploy, and manage projects through Claude
- Owned the end-to-end CI/CD pipeline in Buildkite, building dynamic pipeline generation and gated steps to automate infrastructure provisioning and enable seamless deployments on every merge
- Automated zip upload to deployed build pipeline, using EventBridge-triggered CodeBuild and script functions held in S3 to compile front-end code into production-ready static sites

AI Software Engineer

April 2026 – June 2026

Handshake AI Projects (Contract)

- Refactored AI-generated code across 50+ open-source projects, aligning model outputs with production coding standards to correct logic errors and improve accuracy
- Identified and resolved defects in LLM-generated solutions, cutting downstream bugs before deployment

Co-Founder

Sep 2025 – March 2026

QuantDFS quantdfs.com

- Co-founded a sports analytics platform, reaching 30 active users within the first month of beta launch, utilizing ensemble ML models for statistical predictions and quant-based optimization for fantasy lineups
- Led frontend development and deployment using React, TypeScript, Google OAuth, and AWS Amplify, enabling seamless user authentication and deployment

Software Developer

June 2025 – July 2025

The Paulk Clinic

- Redesigned a legacy clinic website, driving 2.5x monthly impressions and 2.75x contact conversions in 3 months
- Partnered directly with clinic stakeholders to translate business goals into technical requirements, balancing performance and SEO enhancements to deliver a redesign aligned with business objectives

PROJECTS

VoiceVitals: 1st Emory Hacks | *TypeScript/React, PyTorch, FastAPI, GCS/Firebase* | [Devpost Link](#) Nov 2025

- ML pipeline (PyTorch + FastAPI) for early dementia detection from audio in voice recordings, engineering **153** prosodic and voice-quality audio features to improve F1 score from **.2** to **.68**
- Deployed a scalable full-stack SaaS using Google Cloud Services and a React/Typescript dashboard for clinicians to upload recordings, visualize results, and securely store patient data

wdym86: 2nd UGAHacks XI | *React, Node.js, FastAPI, Gemini API, AWS, Docker* | wdym86.tech Feb 2026

- Implemented system design for full-stack restaurant management platform with POS, inventory tracking, and admin dashboards across 25+ pages and RESTful API endpoints; containerized with Docker and deployed on AWS with end to end unit and integration testing across all modules
- Developed a NumPy demand forecasting model to predict sales velocity and automate inventory reorder timing; integrated Gemini API with RAG pipeline for data analytics and generate per-restaurant operational insights
